BE Public Search API Guide

Version:	1.0.4
Revision Date:	September 21 th , 2022
Author:	Tecuity

Document Control

Any changes to the BE Public Search API Guide will follow the Integrated Change Control process. Upon approval of requested modifications, the version number will increase by one and the following information documented in the table below:

Version	Date Applied	Change
1.0.1	10/20/2021	Initial documentation created
1.0.2	12/17/2021	End-points updated
1.0.3	03/10/2022	Production end-points added
1.0.4	09/21/2022	Revised production end-point URLs

1 Introduction

This document is intended to clarify the function, structure, and usage of the California Secretary of State (SOS) Business Entity (BE) Public Search Application Programming Interface (API).

This guide provides instruction on how to use the interface to retrieve entity details filtered either by entity number or a combination of keyword search and created date range.

2 Who Should Use This Guide?

This document is intended to serve as an implementation guide for business and technical resources who intend to retrieve BE information electronically/remotely. The document can be used by technical implementers that need to know how to implement and integrate SOS BE API interface in their environment.

3 Setting Up Your Interface Integration

Onboarding:

1. Navigate in your browser to <https://calicodev.sos.ca.gov>
2. Click on Sign-up and enter the required information to create your account
3. You will receive a link in a confirmation email that you will need to click on, and then you'll be redirected to sign in
4. To Subscribe to an API and receive an API Key, click on Products in the Main Menu
 - a. Select the product you are testing from the list
 - b. Enter a name for your API in the Text Box and click Subscribe
 - c. You'll be redirected to your profile page, which will display all the APIs you are subscribed to
 - d. View, save, and regenerate your API keys on this page

Testing:

Customers are encouraged to create scenarios that align with typical day-to-day activities. The following are the available API end-points for BE APIs in the User Acceptance Testing (UAT) Environment:

1. GET Server Status
 - a. <https://calico.sos.ca.gov/cbc/uat/v1/api/ServerStatus>
2. GET Entity Details
 - a. [https://calico.sos.ca.gov/cbc/uat/v1/api/BusinessEntityDetails/\[?entity-number\]](https://calico.sos.ca.gov/cbc/uat/v1/api/BusinessEntityDetails/[?entity-number])
3. GET Keyword Search
 - a. [https://calico.sos.ca.gov/cbc/uat/v1/api/BusinessEntityKeywordSearch\[?search-term\]\[&created-date-start\]\[&created-date-end\]\[&begins-with\]](https://calico.sos.ca.gov/cbc/uat/v1/api/BusinessEntityKeywordSearch[?search-term][&created-date-start][&created-date-end][&begins-with])

To call the API, include your API Subscription key in the HEADER of the request with the following Key value

-

1. Ocp-Apim-Subscription-Key: **YOURAPIKEYHERE**

Production end-points

1. GET Server Status
 - a. <https://calico.sos.ca.gov/cbc/v1/api/ServerStatus>
2. GET Entity Details
 - a. [https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityDetails/\[?entity-number\]](https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityDetails/[?entity-number])
3. GET Keyword Search
 - a. [https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityKeywordSearch\[?search-term\]\[&created-date-start\]\[&created-date-end\]\[&begins-with\]](https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityKeywordSearch[?search-term][&created-date-start][&created-date-end][&begins-with])

4 Using BE Public Search API**4.1 Search by Entity Number**

To retrieve entity details by entity number, a secured HTTP GET request is sent to [https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityDetails/\[?entity-number\]](https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityDetails/[?entity-number])

At the end of this URL, the following fields must be provided as query parameters:

Required parameter	Type	Description
entity-number	String	The entity number will be searched for in the SOS database.

In addition to the entity-number parameter, please provide your API subscription key in the header request:

Required parameter	Type	Description
key	String	Customer's subscription key found in the API Management Portal.

All API calls will return an HTTP Status code listed below. If an entity is found that matches the entity number provided in the query string, that entity's details will be also be returned in JavaScript Object Notation (JSON) format. (See Appendix A for details on returned fields)

HTTP Status Code	Explanation
200 (OK)	An entity matching the entered entity-number was found in and returned from the SOS database.
400 (BadRequest)	No entity-number was provided or no entity was found that matched the entered entity-number.
500 (InternalServerError)	Unknown server error has occurred.
503 (Forbidden)	Key parameter missing or not recognized.

Sample Valid Query String:

<https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityDetails?entity-number=202150010654>

4.2 Search by Keywords

To retrieve entity details by entity number, a secured HTTP GET request is sent to [https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityKeywordSearch\[?search-term\]\[&created-date-start\]\[&created-date-end\]\[&begins-with\]](https://calico.sos.ca.gov/cbc/v1/api/BusinessEntityKeywordSearch[?search-term][&created-date-start][&created-date-end][&begins-with])

At the end of this URL, the following fields **must** be provided as query parameters:

Required Parameter	Type	Description
search-term	String	The keyword or keywords (separated by encoded space characters) that will be searched for in the database.

The following fields may also be provided as **optional** query parameters:

Optional Parameter	Type	Description
created-date-start	Date (yyyy-mm-dd)	The earliest filing date of entities returned by the search.
created-date-end	Date (yyyy-mm-dd)	The latest filing date of entities returned by the search.
begins-with	Boolean	When “true”, a “starts-with” search will be performed. When “false”, a “contains” search will be performed (this is the default).

In addition to the entity-number parameter, please provide your API subscription key in the header request:

Required parameter	Type	Description
key	String	Customer’s subscription key found in the API Management Portal.

All API calls will return an HTTP Status code listed below. The details for the top 150 entities that match the entered criteria will be returned in JSON format. (See Appendix A for details on returned fields)

HTTP Status Code	Explanation
------------------	-------------

200 (OK)	A search was successfully executed.
400 (Bad Request)	Some or all of the provided query parameters were invalid.
500 (InternalServerError)	Unknown server error has occurred.
503 (Forbidden)	Key parameter missing or invalid.

Sample Valid Query Strings

The following URLs are examples of properly formatted query strings:

- `~/api/BusinessEntityKeywordSearch?search-term=abc`
 - o Returns the top 150 entities that contain “abc” in the name.
- `~/api/BusinessEntityKeywordSearch?search-term=abc%20xyz`
 - o Returns the top 150 entities that contain both “abc” AND “xyz” in the name.
- `~/api/BusinessEntityKeywordSearch?search-term=abc&created-date-start=2020-01-02`
 - o Returns the top 150 entities that contain “abc” in the name and are filed after January 2, 2020.
- `~/api/BusinessEntityKeywordSearch?search-term=abc&beginsWith=true`
 - o Returns the top 150 entities that **start with** the string “abc”.

Sample 400 Errors and Their Causes

When a 400 HTTP status code is returned, it will be accompanied by one of the following errors:

- “A search-term parameter is required”
 - o This error is thrown when the “search-term” parameter is either missing or contains only whitespace characters
 - o Example: `~/api/BusinessEntityKeywordSearch?search-term=%20`
- “The created-date-start parameter must be in yyyy-mm-dd format”
 - o This error is thrown when the “created-date-start” parameter is not a properly formatted date.
 - o Note: Other date formats may work, but the “yyyy-mm-dd” format will return the most reliable results.
 - o Example: `~/api/BusinessEntityKeywordSearch?search-term=abc&created-date-start=today`
- “The created-date-end parameter must be in yyyy-mm-dd format”
 - o This error is thrown when the “created-date-end” parameter is not a properly formatted date.
 - o Note: Other date formats may work, but the “yyyy-mm-dd” format will return the most reliable results.
 - o Example: `~/api/BusinessEntityKeywordSearch?search-term=abc&created-date-end=yesterday`
- “created-date-end cannot be before created-date-start”
 - o This error is thrown when the date specified by the “created-date-start” parameter is chronologically later than the date specified by the “created-date-end” parameter.
 - o Example: `~/api/BusinessEntityKeywordSearch?search-term=abc&created-date-`

start=2020-01-01&created-date-end=2019-01-01

5 Appendix A – Entity Data Fields

Records returned by either the keyword search or entity number search will contain the following data fields:

- EntityID
- EntityType
- CID
- FilingDate
- StatusCode
- PendingStatusCode
- StatusDate
- PriorStatusCode
- StatusChange
- StatusDescription
- ManagementDescription
- Agent1505StatusCode
- EntityName
- ForeignEntityName
- Jurisdiction
- EntityStreetAddress1
- EntityStreetAddress2
- EntityCity
- EntityState
- EntityZipCode
- AgentName
- AgentAddress1
- AgentAddress2
- AgentCity
- AgentState
- AgentZipCode
- MailingStreetAddress1
- MailingStreetAddress2
- MailingCity
- MailingState
- MailingZipCode
- SiFrequency
- StandingVCFCF
- StandingVCFCFDate
- StandingSOS
- StandingSOSDate
- StandingAgent
- StandingAgentDate
- StandingFTB
- StandingFTBDate
